Fahimul Islam Fahim GITHUB PRO

Software Engineer • Mobile App Specialist • IoT Systems Developer

📍 Dhaka, Bangladesh
🔗 github.com/Fahimulislamfahim
✉️ fahimulislam.dev@gmail.com

Professional Profile: Systems and applications engineer specializing in production-grade cross-platform mobile solutions (Flutter/Dart), native mobile applications (Kotlin), reactive full-stack web platforms, and embedded microcontroller hardware. Focused on delivering secure, edge-first architectures, low-latency WebSocket systems, and verifiable software standards.

CORE SERVICES & SOLUTIONS

📱 Mobile Engineering

- **Cross-Platform Apps:** End-to-end Flutter development for iOS and Android with scalable state management (Bloc, Provider).
- **Native Android:** Hardware-integrated apps with background services, zero-latency triggers, and offline resilience.
- **Device Security:** Encrypted keystore storage and biometric sign-in.

🌐 Full-Stack Web Systems

- **Modern Web Apps:** Single-page architectures using React, Next.js, and TypeScript.
- **Real-Time Systems:** Low-latency WebSockets (Socket.io) for vehicle telemetry, location tracking, and live chat.
- **API Engineering:** Structured REST endpoints with PostgreSQL & MongoDB.

🤖 Automation & Multi-Agent AI

- **Headless Automation:** Web scraping, data extraction, and test automation via Playwright and Python.
- **LLM Pipelines:** Multi-agent content orchestration with Google Gemini (gemini-2.5-flash) and FastAPI services.
- **Browser Addons:** Custom Chromium extensions for workflow automation.

⚡ Embedded Hardware & IoT

- **Microcontroller Firmware:** C/C++ programming on ESP32, ESP8266, and Arduino platforms.
- **Hardware-Web Bridge:** Web servers directly on chip for local browser controls.
- **Sensors & Actuators:** I2C OLED screens, relays, and emergency triggers.

TECHNICAL SKILL MATRIX

Languages	Dart, Kotlin, Python, TypeScript, JavaScript (ES6+), C++, C, HTML5, CSS3/Tailwind
Mobile & Desktop	Flutter SDK, Android Native (Kotlin), State Management, Keystore Biometrics, PDF Engines
Web & Backend	React.js, Node.js, Express.js, FastAPI, RESTful APIs, WebSockets (Socket.io), Leaflet.js
Databases & Cloud	PostgreSQL, MongoDB / Atlas, Firebase, Vercel, Railway, Git & GitHub Version Control
IoT & Tooling	ESP8266, ESP32, ESP32-CAM, Arduino, I2C, Playwright, VS Code, Android Studio, Jira

CURATED PRODUCTION REPOSITORIES (MOBILE APPLICATIONS)

CoRide `Dart / Flutter`

Campus ridesharing and carpooling ecosystem designed for DIU. Live route matching, passenger tracking, dynamic fare division, and real-time WebSocket dispatch.

`github.com/Fahimulislamfahim/CoRide`

Sathee (Abhay) `Kotlin`

Edge-first women's safety mobile system for Bangladesh. Silent hardware triggers, earpiece-routed fake calls, route anomaly detection, and 2G SMS emergency fallback.

`github.com/Fahimulislamfahim/Sathee`

MotoFile `Dart / Flutter`

Secure document vault app with biometric fingerprint/face authentication, encrypted local database storage, and integrated dark-mode PDF viewing.

`github.com/Fahimulislamfahim/MotoFile`

BikeHub `Dart / Flutter`

Motorcycle trading and reselling shopping portal. Features inventory cataloging, spec filtering matrices, transaction ledgers, and direct communication channels.

`github.com/Fahimulislamfahim/BikeHub`

Krishi-Advice `Dart / Flutter`

Agricultural advisory mobile tool delivering pest diagnosis, crop treatment advisories, seasonal tips, and weather-linked cultivation guides for local farmers.

`github.com/Fahimulislamfahim/Krishi-Advice`

Nexus-Academica `Dart / Flutter`

Comprehensive university academic workspace providing automated course scheduling, grade estimations, syllabus tracking, and submission reminders.

`github.com/Fahimulislamfahim/Nexus-Academica`

Class-Routine-App `Dart / Flutter`

Departmental routine manager organizing section-specific time slots, instructor availability, lab room designations, and weekly schedule updates.

`github.com/Fahimulislamfahim/Class-Routine-App`

Smart-Planner `Dart / Flutter`

Adaptive time management and daily planning mobile application featuring milestone breakdowns, priority matrix sorting, and local reminder alerts.

`github.com/Fahimulislamfahim/Smart-Planner`

CURATED WEB PLATFORMS & FULL-STACK SOLUTIONS

Co-Ride (Web Edition) `JavaScript / Node`

Web dispatch portal and administrative dashboard for the CoRide campus carpooling platform, orchestrating live rides and map integration.

`github.com/Fahimulislamfahim/Co-Ride`

MealNChill `Full-Stack Web`

Apartment ledger management application handling multi-tenant meal tracking, automated grocery cost calculations, and monthly shared balances.

`github.com/Fahimulislamfahim/MealNChill`

WEB, AI, AUTOMATION & EMBEDDED SYSTEMS

Personify
`FastAPI / Dart`

Advanced social media automation platform utilizing Google Gemini multi-agent pipelines and a Flutter control dashboard for cross-platform post generation.

`github.com/Fahimulislamfahim/Personify`

Ai-Automation-Studio
`TypeScript`

Modular automation workspace enabling visual workflow chaining, headless triggers, and scheduled task executions.

`github.com/Fahimulislamfahim/Ai-Automation-Studio`

ChatBotLand
`TypeScript`

Responsive multi-turn chatbot user interface engineered with modern TypeScript components and customized prompt parameter presets.

`github.com/Fahimulislamfahim/ChatBotLand`

CodeSignalAI
`JavaScript`

Interactive coding assistant and practice tool leveraging AI guidance to debug algorithmic problems and optimize runtime complexity.

`github.com/Fahimulislamfahim/CodeSignalAI`

Auto-fb-Unfollower
`Chrome Ext / JS`

Browser automation extension for batch unfollowing pages and accounts on Facebook with a clean, focused control interface.

`github.com/.../Auto-fb-Unfollower`

Meal-Routine-Genarator
`TypeScript`

Smart meal planning generator producing structured weekly menus based on nutritional goals and dietary preferences.

`github.com/.../Meal-Routine-Genarator`

Hospital-Test-Voucher
`Python`

Diagnostic test voucher and clinical invoicing system managing billing records, doctor commissions, and patient test reporting.

`github.com/.../Hospital-Test-Voucher`

DeskBot
`IoT Hardware`

Physical desktop companion robot built with microcontroller firmware, hosting an embedded web server for hardware-software interaction.

`github.com/Fahimulislamfahim/DeskBot`

Smart-Task-Habit-Tracker
`C++`

High-performance CLI and local task habit tracker written in C++ for tracking goal consistency and recurring routines.

`github.com/.../Smart-Task-Habit-Tracker`

DELIVERY STANDARDS & WORKING MODEL

> **Collaboration & Quality Assurance:** Every project follows strict modular separation of concerns, defensive error handling, Git branch feature isolation, reproducible configuration setups (`.env.example`), and complete documentation for client handover.
